

***The overall objectives of the project ID_774/2007
Entire living complexity. Case Study: University Health
Organization***

- *As a living organism created by man, under which exercise a most important functions of community, the cultivation of educational organizations are healthy as long as their operation meets the desired direction and the normal human life in society, contributing to its fulfillment.*
- *University health organization shall be designed, achieved and interpreted by how we realize the education to provide fulfillment of human life as part of our whole living together.*
- *In our opinion, general education, the university in particular, is responsible both for the positive achievements of human knowledge and the negative gains.*
- *Serious problems facing our entire living life are the common consequences result from human actions.*
- *To stop the backdrop of our shared evolution is essential to respiritualization the education process at all stages of its organic*
- *For this we plan to build and apply an aggregate indicator of academic health organization (AIHO) which constitutes a first step in building a sound future educational institution called university.*
